説明 It allows to hide sub-projects level by level. It's very useful for example to move projects, for administrators with <i>plenty</i> of projects this is our case :-)). The patch is simple and non intrusive (Javascript copied from other part of Redmine with + / - buttons). I did not found a way to include the javascript code in a separate js file (I put this enhancement in our specific plugin).			
journals			
• This piece of css must be added somewhere in a stylesheet file (in a theme for example) <i>Take care of the image url relative path</i> <pre>div.closed span.expander { background-image: url(../..../images/bullet_toggle_plus.png); } div span.expander { background-image: url(../..../images/bullet_toggle_minus.png); padding-left: 8px; margin-left: 0; cursor: pointer; }</pre>			
+1			
...but the patch should be complete, which is, include all necessary changes to the helper and main stylesheet. I think, it would be nice too if the project tree could be collapsed by default.			
TODO: provide a full patch
