説明 Would be nice if issue (and other API objects) will have hooks for adding specific data to the API output. call_hook(:api_issue_show, :issue => @issue) journals The provided patch looks reasonable to me. I found this because I was looking for a way to get the tags associated with a ticket via the rest api. (Kirill, I'm using your Redmineup Tags plugin -- thanks!) Maintainers, please can we merge this in? I don't want to have to resort to scaping the Issues page. I see others are requesting this feature as well #26045 (should probably be closed as duplicate/rejected) related_issues relates,New,26045,Does API REST show fields added by plugins?
