Would it be possible to enable a following feature?

- On Relation add/Change no status mail should be sent (to be set yes/no)

Reason: It leads to spam

journals

Duplicated by #17208.

+1

+1

A mitigation would be to allow adding multiple relations before submitting.
Of course, adding this to the regular issue Edit would be awesome.
(There's already a request for this - Feature #5238 Related issues option accessible during issue creation)

Maybe just add it to the Setting -> Email notifications menu

+1

Many users in my company complain about this

=> + at least 10

I think it can be resolved if "Relation updated" checkbox is added to "Administration" > "Settings" > "Email notifications" tab. IMHO, the checkbox should have been added when #1005 was implemented in Redmine 2.4.0.

!{width: 408px; border: 1px solid #ccc;}.notified_events_relation@2x.png!

Just change the one line below and email will not be sent when setting the relation.

This is just a workaround.
Of course, it is best to select a check box for email notification.   #note-18

I confirmed the operation with Redmine3.4.
The same goes for 4.0.

I hope it helps

models/journal.rb
def send_notification

```
        (Setting.notified_events.include?('issue_priority_updated')   &&   new_value_for('priority_id').present?)
    )
    Mailer.deliver_issue_edit(self)
```

to

```
        (Setting.notified_events.include?('issue_priority_updated')   &&   new_value_for('priority_id').present?)
    )   &&   !(new_value_for('relates').present?)
    Mailer.deliver_issue_edit(self)
```

Added "Relation updated" checkbox to "Administration" > "Settings" > "Email notifications" tab.
I attached a patch.

Setting the target version to 4.2.0.

A test fails on r18582. Could you check the patch?

$ bin/rails   test   test/unit/journal_observer_test.rb:178
Run   options: --seed   52037

Running:

F

Failure:
JournalObserverTest#test_create_relation_should_send_email_notification_with_issue_relation_updated [/Users/maeda/redmines/trunk/test/unit/journal_observer_test.rb:190]:
Expected: 2
  Actual: 4

bin/rails test test/unit/journal_observer_test.rb:178

Finished in 3.732650s, 0.2679 runs/s, 0.5358 assertions/s.
1 runs, 2 assertions, 1 failures, 0 errors, 0 skips

I think the expected value of @ActionMailer::Base.deliveries.size@ should be 4 because notification for 2 issues (both ends of the relation) are sent to 2 users (jsmith and dlopper). jsmith is the author of both issues. dlopper receives all notification of the project (his email notifications setting is "For any event on all my projects).

!{width: 639px; border: 1px solid #ccc;}.email-deliveries@2x.png!

Thank you for pointing it out. The reason for the incorrect assertion result was not enough fixtures.

I rewrote the patch.

Can you split the test like you did with the patch for #17840?

Thank you for pointing it out. I split the test.

Attach the patch.

Setting the target version to 4.1.0. I think it is better to deliver this feature along with #17840 in 4.1.0.

Attached is an updated patch that can be applied to the current trunk.

I think that this patch doesn't solve the reported issue.
What it brings : it would let users enable notification for relations when they haven't enabled notification for all updates.
What is requested : have notifications for all updates +except+ when relations are updated

The right solution would be to add checkboxes for +all+ the possible causes of notification and let users choose.
