説明

hi i cant integrate git with redmine. I have looked at wiki topic and configure apache, grack, git but when i trying clone git repo i see

```
Can't locate object method "some_auth_required" via package "Apache2::Redmine" at /usr/local/lib/perl5/site_perl/5.16/m/Apache2/Redmine.pm line 321./n
```

I change little the Redmine.pm code

```
package Apache2::Redmine;
```

```
=head1 Apache2::Redmine
```

Its more comfortable for me in freebsd.

If someone have issues for this?

P.S. with default Redmine.pm the same

Thx for help
