説明

It would be nice to have the possibility to mark categories in a project as "inactive".

Deleting is not an option, as the old and closed tickets won't show the category anymore.
Leaving the category as is isn't an option either, as the customers can still add new tickets to this, maybe deprecated, category.

Therefore one should be able to mark a category in a project as "archived" or "inactive" to keep the category name but prevent users adding new tickets to this category.

journals

This 10-day old plugin is an attempt to meet this need: and has two users giving it 5-stars already

http://www.redmine.org/plugins/redmine_archive_issue_categories

Yes, I'm the plugin author ;-)
However, I would rather like to see this implemented in redmine core than having this as a plugin...

Thanks anyway for the plugin!

Similar: #16997

This feature would be really useful. In redmine 4.x the old plugin from T. Fischer stopped working (it breaks the context menu styles and entries).
See #35813

Would be nice, if redmine supports disabling old (not to be used) categories.

Hello, based on the outdated plugin I tried to integrate the changes into current git master, tested the UI with a running server and created some unit tests.

The plugin was running fine with redmine 3.x, but for redmine 4 the overwritten files had changed so the UX got broken and also the routes needed to be fixed (since this seems new with redmine 4.x).

I'm not 100% sure if the version in migration is right (6.1?) and if the config/routes.rb is properly since I'm not really into ruby/rails dev (so sorry if this is not proper coded). I mainly ported the plugin into the source. For me the code worked incl. routing and it provided same functionality than the old redmine plugin.

Tests were green beside one search test (Must be superuser to create this extension).

If the code/patch needs adaption, please let me know.

Shall I create a new issue, or will this issue be updated to tracker "patch"?
