説明

Currently, it is not possible to link to an anchor of the current wiki page without having to also mention the name of the current wiki page in the link. This becomes tedious quickly if there are many such links. Should the wiki page later be moved, these inline links become quickly obsolete.

The attached patch which we developed for one of our customers at "Planio":<https://plan.io> adds the possibility to link directly to an anchor using the following syntax:

- simple link: @[#Anchor](#)@
- link with custom text: @[Link Text](#)@

journals

I think the proposed behavior is more natural than the current behavior. Setting target version to 4.1.0.

Tests for this feature.

I found that the patch generates a confusing link in some cases. If an anchor consists of only numeric characters, the generated link looks like an issue.

!{width: 410px; border: 1px solid #ccc}.16313-confusing-link@2x.png!

Does anyone have any comments on this behavior? I think this is acceptable because people rarely create wiki pages with such names.

Committed. Thank you for sharing the patch.

It would be better to update documents as well. I will make a patch to update documents for all languages.

Please push to Github.

Thanks.

Here is a patch for "Wiki formatting" documents.

Updated the patch for help files. I hadn't updated wiki_syntax_detailed_textile.html for fr, ru and zh.

Updated wiki help.
