**説明**

When looking at the list of issues in a project that contains sub-projects, I can add a filter for "Subproject" with the value "none" which filters out all the sub-project issues, leaving just the issues that are directly in the parent project. This is very useful.

However, when I click "Save" and give it a name and then save it, the Subproject filter gets dropped.

## Environment:

```

Redmine version      2.5.0.stable.12980
Ruby version         1.9.3-p484 (2013-11-22) [x86_64-linux]
Rails version        3.2.17
Environment          production
Database adapter     Mysql2
Redmine plugins:
redmine_dmsf         1.4.8 devel
redmine_time_tracker 0.4

```

## journals

Seems to be working now, though I'm not sure how -- I didn't change anything. In fact, I had deleted it, then it showed up again today, this time working correctly.

If I learn more, I'll reopen/update this.

I guess you're checking "For all project" when saving your query? The subproject filter is not available for cross-project queries, that's why the filter is dropped.

Yes, I did. I found it very useful, and so wanted to share. :)

Good to know why it didn't work, thanks.

The subproject filter is not available for cross-project queries, that's why the filter is dropped.

Too bad. This was very useful functionality for me...

for example i have this project structure:

```

Company1
-- Project1
--- Subproject1

```

```
--- Subproject2
-- Project2
Company2
-- Project1
--- Subproject1
-- Project2
Company3
-- Project1
--- Subproject1
--- Subproject2
-- Project2
```

and there are about 50+ companies wich must use similar querries to use.  
Now I must make 150+ similar querries instead 3.

---

---

I want to add a custom query for every project to list issues with subprojects'. How can I edit the query?
