説明 Hi all, I want to add a custom field "Resolved by" just like filter "Assignee" in issue tracking. How can I make the value of "Resolved by" as same as value of "Assignee" in different projects dynamically? Thanks. journals +1 One more thing, is there any way to populate a custom field value(user type) if assignee changes any bug status (say open to resolved) then custom field Resolved By should get populate by Assignee's name
