**説明**  
Requesting feature for allowing setting visibility and use-ability settings for Issue Trackers per role per project.

Would like to have a way to:

- Allow only certain roles to create certain issue tracker issues for a particular project.
- Allow certain roles the ability to "edit" or "update" that particular issue tracker type.
- Allow certain roles the ability to view that particular issue tracker type.
- Disallow certain roles from being able to view that particular issue tracker type.

journals

I fully support this.

In our organisation we do have a project with feature and defect and we would like the role tester can ONLY create defect type ticket and not feature.

+1

I support this also.

We want to have a full transparency until a certain level. But the concrete "Tasks" for a person should not be seen by a bigger audience.

Hi All,

I think tracker wise control can be handled through this plugin [http://www.redmine.org/plugins/redmine\\_track\\_control](http://www.redmine.org/plugins/redmine_track_control)  
As this is a plugin and not a core part of redmine, but for the time being, this plugin will quench your thirst.

Hi Toshi MARUYAMA,

It is my humble request to include this in redmine core asap.

@Lajish

Have you tried the plugin? If so, what version of redmine?

I for one, cannot get those plugins to work on any of the newer versions.

I didn't try it. But I will test it in my Test Server and let you know about its status very soon.

Hi there,

I tried this plugin in 2.4.2 & 2.5.2 version and it worked fine. This plugin helps you to set role wise control over tracker creation...:)

Hmm.. I tried it on those versions..

I get errors when trying certain things; and when creating issues, it behaves oddly. I cannot get it function correctly. The names of the trackers also is bugged, but thats just cosmetic.

You have tried testing out creating issues with different users/roles?

Installation of the plugin goes smoothly, but the actual functionality with redmine as a whole does not work for me.

---

+1

FTR: #285 does already great part of this feature (except "per project")
