説明

This functionality should provide the manager of a project to make a stored and often used custom query for tickets/issues available as a Tab (Module) on project level (selectable when storing the query: show as tab).

Benefits:

- often used queries are available via single click
- as custom tracker are (slightly mis-)used for other purposes as meetings, notes, general responsibility this help structuring a project and increase navigation.
- furthermore it would support using redmine ticket system in a very generic usage.

journals

We access our redmine 99% of the time through browser bookmarks that point to custom queries, and after navigating inside Redmine we often use the same bookmarks to "start again" from some bird-view.

I could definitely see value in flagging custom queries to be always visible as tabs in a project.
