説明

For every issue Redmine runs a separate query to get the roles for every member of the project, but only when Allow Group Issue Assignment is enabled.

In app/models/project.rb:

```
33: has_many :member_principals, :class_name => 'Member',
34:         :include => :principal,
35:         :conditions => "#{Principal.table_name}.type='Group' OR (#{Principal.table_name}.type='User' AND
#{Principal.table_name}.status=#{Principal::STATUS_ACTIVE})"
```

changing line 34 to read:

```
:include => [:principal, :roles],
```

definitely solves the performance issue, but are there any pitfalls in fixing it that way?

journals

This problem also occurs when you have a custom field with user format.
