<b>説明</b>			
<p>At the moment, you can only add a category filter to an issue query when listing issues of a single project. When listing tickets of more than one project, the category filter isn't available because categories are not shared between projects. That's okay.</p> <p>However, it would be nice if you could add a freetext category filter which searches for categories in the selected projects that match this search string.</p>
