説明 Currently, issue deleted are ... deleted :-) To avoid to lost something, it would be great to have a final notification (same notifications rules + Redmine administrators). This notification should have the full history instead of final deletion step. I don't know how to handle attachments (attached or not - not so important). If you prefer to have a 'soft delete' like #1380 or #6666, this feature is useless and you can cancel it. But please, try to handle this deletion differently soon. journals +1 if #1380 is not being implemented I think, it is very important feature. We have 10 "managers" in project + 3 administrators. And I don`'t know, who and when deleted the issue. All info about issue dissapeared, even in "activity page"! related_issues relates,New,1380,Deleting an issue only marks it as being deleted relates,New,6666,Soft delete of issues duplicates,Closed,18271,Send notification email when delete issues duplicates,Closed,25779,cannot know who delete issue
