説明 Hello! We have a requirement that while we add a new issue, we should be able to add its followers [whom the current task precedes] directly from the screen just the way we get a screen when we want to create a sub-task of an issue. Or instead we could have a drag and drop feature, but it has to be much more proper, than the current available plugins like "redmine_planning" and "redmine_stuff_to_do", as stuff to do plugin does not set a follow precede relation, while redmine planning is too clumsy and not efficient from the project management need of ours. How to do this? Is there any plugin available?
