<b>説明</b>			
Hi,			
When I try to create git repository after the svn with reposman.rb, I get the message: Failed. Response code = 409. Response message = Conflict.			
I found this feature here : <a href="http://www.redmine.org/projects/redmine/wiki/Install_Redmine_with_git_and_svn_support_over_https_on_Debian_wheezy_using_the_Debian_repository">http://www.redmine.org/projects/redmine/wiki/Install_Redmine_with_git_and_svn_support_over_https_on_Debian_wheezy_using_the_Debian_repository</a> .			
How can I do that without make an insert in the database?
