説明

Hello,

While working on improving PDF export I found an issue that may be related to main classes:
When using {{ include }} in the wiki page, the WikiPage object returned actually contains the right content but its attachment attributes is empty.

I was expecting a list of all attachment, from the page itself and from any page included.

Here is a dump of a few "page attribute"

From the main page:

```
#####
Main_Wiki_Page
-----
[#]
-----
#
```

From a page being included into Main_Wiki_Page

```
#####
Included_Page
-----
[#, #, #, #, #, #]
-----
#
```

The first one should return a concat of both arrays, what you think ?

I'm available for any testing during the week days (GMT+1).

Thanks in advance,

Regards, Adam
