説明			
message#45181			
RedmineCustomFields says :			
Data in time tracking activity custom fields can be used and/or will be displayed in the Timelog report and the Project settings. See also #4077 for some details about this nifty feature.			
I don't know it is regression or wrong documentation.			
journals			
Well, it is the documentation that is not specific enough. Time entry activity custom fields are available[1] on the timelog report as @available_criteria@ (source:/trunk/lib/redmine/helpers/time_report.rb@14042#L137), but <u>only those</u> that are of the <u>boolean</u> or <u>list</u> custom field format and where the <u>list</u> field format which has " <u>multiple values</u> " enabled is <u>not included</u> (source:/trunk/lib/redmine/helpers/time_report.rb@14042#L140). Furthermore are time entry activity custom fields of <u>all</u> custom field formats (and without further restrictions) rendered on:			
• the administrative (global) time entry activity enumeration edit views; • the (per project) project settings views (to override the global values).			
fn1. introduced with r2951 for #4077.			
I don't know it is related or not, #1766#note-30 says there is a regression.			
I am also having this problem... we have a custom field called "Job Number" we would like to be able to create a report thru the tool that exports the week with time spent along with the job number... Its not working...

Toshi, I don't think there was a regression in Redmine version#60 regarding this feature. Starting from Redmine version#1 onward (which introduced custom fields as timelog report criteria), only boolean and list custom fields were included (see r1340). This behaviour hasn't changed over time (besides the addition of the exclusion of multiple-value enabled list custom fields).			

See #25773 for a general feature request to add more custom field types as report criteria.

Btw: I have added a footnote to [\[\[RedmineCustomFields#Fields-for-Activities-time-tracking\]\]](#) wiki page ("diff":/projects/redmine/wiki/RedmineCustomFields/diff?utf8=%E2%9C%93&version=23&version_from=22&commit=View+differences) with a reference to this issues note-1, for the time being.
