説明 Both SSL and TLS connections fails dues to certificate violation as discussed on "this": http://www.redmine.org/boards/1/topics/33669?r=34386 forum. The resolution is in "this": http://www.redmine.org/boards/1/topics/33669?r=34386#message-34386 message. I hacked lib/redmine/imap.rb in the same way and it worked fine, so, I'm requesting a way to pass an option from command line for certificate verification. I have tested also "this":http://www.redmine.org/boards/1/topics/33669?r=34390#message-34390 and it works but as discussed it affects entire application. I have tested also #16823.

Could you try #19232?			
Unfortunately, with STATTLS I get bad response error complaining about sending command in invalid state :(
