説明 I need to create a custom field allowing users to specify a +set+ of issue related report numbers and display each of them as link to external system. Now, I can only create a Text field with: - Regular expression: <code>^+)([R,S])(/d+)\$</code> - Link to URL: <code>external/search?pno=%m1%&t=%m2%no=%m3%</code> This works fine but I can only enter +single+ report. I can create a Long text field with: - Regular expression: <code>^+)([R,S])(/d+)(/n?)*\$</code> This allows to enter one report per line but Long text has no Link to URL :(journals Hello, Could you solve it?
