説明

It is currently (3.0.2) impossible to browse a repository in subprojects, whereas it is possible to refer to changesets in subprojects (in wiki pages, issues, etc).

Example :

setup project "A" with repository "R"

setup project "B", under project "A", without a repository

go to project "A", you have the "repository" tab

go to project "B", you don't have the "repository" tab, but you can refer to a changeset of the repository "R"
