説明

For most Redmine items (news, documents, wiki articles...), the link displays the title as the link's text, and follows the syntax: news#, document#, etc.

For issues, the only syntax is simply #, and shows the issue number as the link's text.

This patch adds the syntax issue#, and will display the bug title followed by the bug status as the link text. The patch does not remove anything, it only adds a new syntax.

journals

Here is the patch for Redmine 3.4.1

Interesting feature. I think this patch makes Redmine links more consistent.
Here is an example. "issue#14" is converted as follows:

!{width: 325px; border: 1px solid #ccc;}.issue-link-sample.png!

+1

I agree that supporting the issue#id is a good idea and will make redmine links more consistent, but I'm not sure that is a good idea to have different formats for displaying the issue title. Maybe is better to have a setting to choose the issue title format (like we have for users).

@Marius: I'm not sure what you mean by "to have different formats for displaying the issue title".
The added format is simply putting the link title of the # tooltip into the link text itself when using issue#. There is no change of format, apart a colon replaced by brackets to avoid colon repetition:
#14 -> link text "14" with tooltip: "Bug: Private issue on public project (New)"

issue#14 -> link text "14: (Bug) Private issue on public project (New)" with no tooltip

+1

I have created another issue for the format thing: #26465. Would you mind considering this as well?

The added format is simply putting the link title of the # tooltip into the link text itself when using issue#. There is no change of format, apart a colon replaced by brackets to avoid colon repetition: Exactly what you said, having different formats for issue links depending on the syntax used: #14 -> link text "14" with tooltip: "Bug: Private issue on public project (New)" issue#14 -> link text "14: (Bug) Private issue on public project (New)" with no tooltip Robert Schneider wrote: +1 I have created another issue for the format thing: #26465. Would you mind considering this as well? In my opinion, I think it is better to track the format change in a new issue. In my opinion, I think it is better to track the format change in a new issue. Isn't #26465 a new issue? Well, you have the short display (with #) and the extended display (with issue#). I don't see why it should be an issue to add the possibility to have a new formatting. At least, in my company, I've implemented this patch for more than 2 years now, and both forms are used alternatively by users, depending on what they need, and nobody ever complained about being misled by the two syntaxes. Okay, it's just a patch. Of course, the format can be changed. I just thought that it may finds its way into Redmine and then it would have been nice if the Redmine settings could offer an option for that. In #29488 is introduced a new syntax for linking to issues that includes tracker name and subject. related_issues relates,New,26465,Make the format of issue links configurable relates,Closed,29488,##123 syntax for linking to issues with tracker name and subject
