説明

With respect to #6118, the only option that seems to be missing under "subtasks" is ability to show issue hierarchy depth to some level. This is useful to see overall list of job to do for a project to some level of details.

journals

Here is the SQL for "subtasks_depth" filter:

```

def sql_for_subtasks_depth_field(field, operator, value)
  case operator
  when "*"
    return
  when "!*"
    "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}.lft
ts.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) = 0"
    when "><"
      depth_from = value.first.to_i || 0
      depth_to = value.last.to_i || 0
      if depth_from > 0
        depth_from = depth_from -1
      end
      if depth_to > 0
        depth_to = depth_to -1
      end
      "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}.lft
ts.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) BETWEEN " + depth_from.to_s + " AND "
o_s
    else
      depth = value.last.to_i || 0
      if depth > 0
        depth = depth -1
      end
      "(SELECT (COUNT(parents.id) - 1) FROM #{Issue.table_name} AS parents WHERE #{Issue.table_name}.lft
ts.lft AND parents.rgt AND #{Issue.table_name}.root_id = parents.root_id) " + operator + " " + depth.to_s
    end
  end
end

```

Is there a chance to add this in one of the 3.1.x release?

I would but unfortunately I don't know how to add tests :/
