説明 For serial migration from another PM system (or master-master integration) I suggest add ability to set dates for issues and their logs /journals in the past on the create/update issue methods, and in the issue journal update through REST API What i mean ? For example: <pre>POST /issues.xml <?xml version="1.0"?> 1 Example 4 2001-01-01</pre> Or similar like X-Redmine-Switch-User (setting it in HTTP Headers) X-Redmine-Override-Session-TimeStamp: 2001-06-27T17:18:26Z journals
