**説明**

We have a project custom field where its set to:

- Not Visible
- Filterable

With the custom field set in this way, non-administrators are not able to filter by these custom fields.

I would like the options for filter-ability to still have an effect regardless of the visibility option setting.

Not sure if this is intended design or not, but my guess is no since the option to be filterable and the visibility option of the custom field are separate options with no indications of whether or not they affect each other.
