説明 This operator might have special meaning in textile, but I didn't not find it in the documents. When I input this as plain textile text or as inline code (betwee @ characters), sometimes it disappears. This is annoying, because = = is the equality operator in many programming languages. I will paste this text below: <pre>@x == y && a == b@ @x == y && a == b@ == abc == === abc === = abc = x == y & a == b x == y a == b @x == y && a == b@ @x == y && a == b@ After pasting: @x == y && a == b@ @x == y && a == b@ == abc == === abc === = abc = x == y & a == b x == y a == b</pre>			

@x == y && a == b@ @x == y && a == b@
