**説明**

when listing time\_entries or getting a time\_entry by REST API, the issue name won't show.

for example:

```
GET /time_entries.xml
```

```
4
```

```
1.0
none
2015-09-22
2015-09-22T01:40:26Z
2015-09-22T01:40:26Z
```

It would be nice to add the issue name in REST API, in this way, we needn't call another API to get the issue name.

**journals**

The attached patch adds issue subject to time\_entries index.

Tested on Redmine 3.2 but it should be ok on 3.3 and 3.4 as well.

Plz can we merge it into stable?
