説明 It is not user friendly when you use coloring of issues by priority and at the same time alternating rows colors. journals Please describe more details. I meant that issues in the Issues tab have alternating colors for rows, i.e. odd or even rows have color that differs from theme background color for tables. But I believe almost all themes have special background colors for issues with different priority (for example, red for urgent, pink for high, light blue for normal and so on). I this case alternating colors interfere with the priority colors in the table of issues and it become more difficult for the user to distinguish priorities. I mean priority coloring style expects that all the issues in the table have the same background color. But now we have styles mix.
