説明

When formatting characters are used with no spaces before them, (e.g. italic text), the format is not applied.

See the following examples

- text without a space: some_text_, some*text*
- text with a space in between: some text, some *text*

This prevents us from using the wiki to enter some simple italian text (for example, "l'albero") without leaving an aesthetically unpleasant space in between ("l' albero")
