説明 If later on another custom field with an default value will be added. All issues will have the state not assigned. Only after changing issue the default value will be applied. If you're using the REST API this will cause problems because all issues have to manually set to the default value. Two Fixes would be nice: Is there a reason why the creation of a new boolean custom field isn't automatically set on creation? Would it be possible to do this without sending for every issue an mail.
