説明

Dear,

When i i make an issue with a picture in the picture isn't shown inline. I looks like the link for the inline is nog good, while the link for the on the buttom of the mail is correctly.
i've filed in the correct hostname for the server, and the link in the buttom of the mail works fine, while the inline picture doesn't have a host before the url.
!mail_attachment.png!

journals

See [[Submissions]].

And what is your description as mail body?

I looks like i can't get the whole code from the mail.
But it looks like this :
The full path of the picture is
http://www.redmine.org/attachments/download/15926/mail_attachment.png
while the inline image gets as path : /attachments/download/15926/mail_attachment.png.

I looks like i have the same issue with the mail's from this issue.

The problem is solved with the patch from <http://www.redmine.org/issues/2770>

Please see [[submissions]].
