Current situation:
We have some kind of "_Template Project", where are ticket templaes for all different kind of projects.. When starting a new project, I'll select one-by-one all tickets I want to copy from template to destination (new) project and copy them. Everything works, except that ticket's categories are empty in the new project. I would like to have ability - some checkbox? - to create all missing categories in destination project, so when I copy all tickets from template to destination, categories will be preserved.
