Example:

- I have a category called "Documentation" in two different projects.
- I go to '"Projects":/projects and choose "View all issues":/issues
- Then I expand *Options* and select *Group results by* @Category@.
- There are two grouping for @Documentation@, one per project.

It appears that the grouping is done by @category_id@, not @category.name@.

journals

Because category depends on project.

+1

Also, I don't see it referenced anywhere in another open issue but the subtotals next to each grouping don't match the number of issues in the group in many/most cases. See attachment.

related_issues

relates,New,8192,Make a global category filter available from issues list at All Issues level
relates,New,26023,Category filter only shows categories of current project
