説明 The problem occurs for example when child issues have trackers that aren't present in the destination project. This very simple solution just displays a generic error message if the save is aborted due to a failing child save.			
journals possibly related to #15319			
Message changed to a bit more specific one that includes the ID and the cause of the failure, eg: "Subtask #NNN could not be moved to the new project: Tracker is not included in the list". It includes details about the first child that fails but I think it's more usefull to know what to look for exactly. Please check that the german message is OK. small fix for the german wording Thanks.			
related_issues relates,Closed,15319,Can't Move Parent Ticket Between Projects relates,Closed,11148,Moving issues with sub issues between projects fails
