<b>説明</b>			
<p>We created an Odoo -&gt; Redmine connector for uploading time spent from Redmine to HR tools in Odoo (<a href="https://github.com/savoirfairelinux/connector-redmine/tree/ddufresne_port_to_8_0">https://github.com/savoirfairelinux/connector-redmine/tree/ddufresne_port_to_8_0</a>).</p> <p>When we call that function from a superuser API key, all works well, but when it is normal user API key, it does return a forbidden exception :</p> <pre>redmine_api.user.filter(name="SOMEUSERNAME")</pre> <p>I think that to reinforce security by not giving superuser Redmine API key to Odoo would be interesting.</p> <p>That would be possible by allowing standard Redmine users to use API to filter users by their username instead of throwing an exception.</p>

<p>There is the patch for the development version. Requesting review for implement.</p> <p>GitHub pull request if its now a thing : <a href="https://github.com/redmine/redmine/pull/86">https://github.com/redmine/redmine/pull/86</a></p>			
<p>You can use this patch if you have Redmine &lt;= 3.2</p>			
<p>When removing the admin requirement on @UsersController#index@, there need to be the @User.visible@ scope added to the ActiveRecord query in order to only show users which are visible to the current user.</p> <p>Once this is fixed, I think it is a great idea to have a user listing available. With the now available role-based controls for the user visibility, this should work without negatively affecting privacy.</p> <p>I think Defect #7773 is trying to solve same problem of this and I posted a patch on that thread.</p> <p>Could I get a feedback for that patch?</p>
