<b>説明</b>			
Hi,			
When an issue is moved to another project, it's subtasks are automatically moved to the project (with no journal for the move).			
This patch :			
<ul style="list-style-type: none"> <li>• adds a configuration to choose if the subtasks follows</li> <li>• enable the journal for the project move on subtasks</li> </ul>			
journals			
<p>This can be surprising to see children issues moving to new parent issue project when parent is moved, because this is done without giving the choice and with no real hint.</p> <p>This can be an issue when some children issues should not be seen by some members of the new project (real issue seen in our company !).</p> <p>This patch adds a global option to forbid issues to follow the parent.</p>
