説明

Inspired by #8761.

Could you also add a predefined parameter "This week" which actually looks like

```
where("#{TimeEntry.table_name}.user_id = ? \
AND #{TimeEntry.table_name}.spent_on \
BETWEEN ? AND ?", User.current.id, \
Date.today - (Date.today.cwday - 1) % 7, \
Date.today - (Date.today.cwday - 1) % 7 + 6).
```

This is important for employees who have to register defined amount of hours on weekly basis and it's useful to see amount of time that you spent/registered during current week instead of "last n days" that may include days from previous week and current week.
