説明

The subtask list should be collapsible when viewing a parent task.

This would be especially useful when using a parent task to collect subtasks that are in turn collectors for other subtasks, essentially a tree structure.

Simple example from a foundry:

Add tax reports

- ||- Tanks
- ||- Silos
 - ||| - Sand silos
 - ||| - Gravel Silos
- | - Tax reports for inventory
 - || - Pattern shop
 - || - Flask repair
 - || - Facilities Management
 - ||| - Cupola
 - ||| - Shakeout
 - ||| - Molding
- | - Tax reports for labor
 - || - Salary laborer
 - || - Hourly laborer
 - || - Contract labor

||| - Onsite

||| - Offsite

The start of each level of indentation should be collapsible, so that it's easy to get a high-level view of what's left to be done.

journals

Hi Alex,

there is a tree view plugin for issues lists, which supports this. https://github.com/Loriowar/redmine_issues_tree

cheers

Immanuel.
