説明

When exporting a wiki page in HTML (using /projects/id/wiki/title.html), if some text is hidden in a @[表示隠す](#)

@ macro, then the exported page doesn't allow to click on the link to see the text.

h3. Steps to reproduce the bug

Create a wiki page in a project with some text:

h1. This is a test

```
{{collapse(Click to show/hide)
This is hidden.
}}
```

Try to export this page as HTML

```
curl https://server.ext/projects/project_id/wiki/Title.html > page.html
```

Open the HTML page. If you click on the "click to show/hide" link, nothing appears.

h3. Possible causes

This is obviously due to the fact that the JavaScript used by the @[表示隠す](#)

@ macro isn't exported with the HTML page. Perhaps it could be easily added, like the CSS code which is already exported.
