説明

I propose to rename the variable name "issue" to "item" in the following QuerysHelper methods:

- column_content
- column_value
- csv_content
- csv_value

These methods are used by two different entities (Issue and TimeEntry) and using the name "item" instead "issue" is less confusing. The same rename was made in r15639 (queries_controller).

journals

Passed all tests. Setting target version to 3.4.0.

Thank you for your daily contribution.

Committed, thanks.
