説明

This patch is related to #10989 and adds the following changes:

propose in parent task auto complete only open issues if the issue is open

propose in parent task auto complete only closed issues if the issue is closed

In this way we'll reduce the changes to choose an invalid parent issue.

journals

Attached another patch that can be applied after my previous patch that adds a new small improvement to the issues returned by the autocomplete. It filters out from the proposed issues the subtask (from which the search is made).

Actual behaviour:
!current_issue.png!

Patch committed with slight changes (SQL error with PostgreSQL), thanks.
