説明 Assume the following situation: • John (id: 2) and Dave (id: 3) belong to a group. • The group is an assignee of an issue which subject is "Assigned to group". If you run "rake redmine:send_reminders users=2", the issue "Assigned to group" should be listed in the reminder which John receives. But in fact it is not. This is a test code to catch the problem: Index: test/unit/mailer_test.rb =====
