説明

A have a bug with issue list and projects with the same name.

On the demo.redmine.org you can see the projects and issues what can you demonstrate the bug.

Steps to reproduce:

1. Let's create three projects ABC, ABC2 and ABC again in ABC2 (sub-project);
2. Let's create two issues for project ABC and "Start date" = 2017-02-25;
3. Let's create one issue for project ABC and "Start date" = 2017-02-27;
4. Let's create one issue for project ABC\ABC2 and "Start date" = 2017-02-26;
5. Let's create one query with group by project name and sorted by "Start date" field;
6. When we apply this query for the issues list - we can see three groups with ABC name, but there is must be only two of it!

Environment:

Redmine version	3.3.2.stable
Ruby version	2.1.10-p492 (2016-04-01) [x86_64-linux]
Rails version	4.2.7.1
Environment	production
Database adapter	Mysql2

SCM:

Subversion	1.9.5
Cvs	1.12.13
Git	2.7.4
Filesystem	

Redmine plugins:

redmine_checklists	3.1.5
redmine_default_assign	0.6
redmine_default_custom_query	1.2.0
sidebar_hide	0.0.8

journals

Is there any possibility to write the full name of the project in the group name in issues list?

"ABC" for the first two issues and "ABC2 \ ABC" for the third issue?
