<b>説明</b>			
<p>I have a newly created project with some repositories, but none of them is marked as "main". If I now go to the repository tab, redmine shows a nice error page, saying it could not find an entry or revision in the repo (number 404). More importantly, the non-main repositories do not appear on the side-bar, where they usually are.</p> <p>If I create an empty main repository using git the error persists, since git has no initial commit in it.</p> <p>Only after I do some initial commit on the main repo, I can see the list of sub-repos in that project.</p>			
journals			
<p>With no repository set as default, the Repository tab should not even be displayed. Did you change this behaviour?</p>
