説明

Automatic increase in width of query columns

journals

Can you try the fix from #26568 that was already committed for Redmine version:3.4.3?

It's not about values select.
It's about columns select.
First attach is an image (extension missed)
fixed image attached.

PS: first patch have redundant 'width: auto', second patch is good.

Thanks for your feedback, I've misunderstood the select.

Committed, thanks.
