説明 As per current setup, I guess we cannot measure the storage utilized by each project in the environment. Redmine system store the attachments that belongs to individual project by the update-time and not with the project name. So that we can see the folder of date in hard-disk, such as 2017,2016, 01, 02... And in that folders, file-name is like date_xxxx.jpg. For example: 170726080102_342ef6f5b1029970a97db8c1411b2718.JPG Is it possible to view the storage utilized by each project from the Administration window.
