説明

A small UX improvement is to use a "number input":<https://developer.mozilla.org/en-US/docs/Web/HTML/Element/input/number> instead of the classic input for the Gantt months field.

Benefits:

- users can select the number of months using the mouse or/and mouse wheel
- it validates the field value client side
- on mobile devices, the numeric keyboard is shown

Thank you for the interesting patch. But I found that the input#months field is too wide in Firefox. Could you add some CSS to adjust the width to your patch?

Firefox: input#months is too wide

!{width: 400px; border: 1px solid #ccc;}.month-width-firefox@2x.png!

Chrome: no problem.

!{width: 400px; border: 1px solid #ccc;}.month-width-chrome@2x.png!

Thanks for finding the issue. Attached is the updated patch with the fix.

The width of input#months field looks fine now. Thank you for adjusting it.

Setting target version to 4.1.0.

Committed in the trunk. Thank you for improving Redmine.
