説明 Here's a capture of what I would like to see improved. When I am editing a Wiki page and choosing a "Parent" page, I have to scroll through the list to find the exact page I want. The double ">>" and possibly the white-space prevent me from quick-jumping to the letter "V" for this example. !example1.png! However a "top-level" page such as "Wiki" in the capture below, I am able to "quick-jump" by pressing "W". !example2.png! It would be very beneficial to have complete quick-jump functionality, for example, if I started typing the letters "vmw" it would focus on the first matching string. Thanks!			
journals Any news?
