説明

Totals should exclude values from custom fields for which the context does not allow the user to see.

Example:
We have a custom field field1 defined that is only visible by a manager.
!screen1.png!

I'm a developer on project 1 and a manager on project 2.

If I go in the project 1's issues I can see the field1 in the columns, it is empty since I don't have the permission to see it, but I can see it summarized in the totals:
!screen2.png!

I didn't find any issue talking about it.
Is it a work in progress ?
