説明

In queries, the operator "All" actually returns only fields which are not empty.
Let's say I create an Issue Query with the following filter:

Assignee:

ALL

This will return all the issues with the assignee field not empty, same for any filter where the operator "ALL" is available.

- Could we change the naming of "ALL" to "Not empty" somewhat?
- It can still be useful to have a true "ALL" operator which returns any result (Empty OR Not Empty), because then we can quickly change the operator without having to remove/add the filter (especially if many filters are available to select from)

journals

In our redmine install, we have "ALL" instead of "ANY", but the "problem" remains

FTR: r10562 changed "All" to "Any".
