説明

I would like to have the following configuration for the workflow of a Reporter:

[s]he may only create or re-open a closed ticket;

if a ticket is in state " Feedback ", [s]he may edit the ticket, and the next state *must be In Progress*.

So I gave the Reporter Role the issue tracking permissions (inter alia) " Edit issues " and " Add notes ", and configured the workflow as in the attached screenshot " Config.png ".

However, when a user with role Reporter now edits a ticket in state " Feedback " for which [s]he is the assignee, the combo for " Status " (see screenshot " Result.png ") shows both the " required " next state (In Progress) *and* the current state (Feedback) as possible values. But the latter should actually not be allowed according to the configuration.

Did I miss something in the configuration, or is this a bug (or feature)?

My environment, on a standard Debian Stable (Stretch) box:

- Redmine version: 3.3.1.stable
- Ruby version: 2.3.3-p222 (2016-11-21) [x86_64-linux-gnu]
- Rails version: 4.2.7.1
- Environment: production
- Database adapter: PostgreSQL

journals

I'm poking around trying to see if there is a bug reported for my issue, which is this: Existing tasks do not reflect changes to workflow. If I create a task, then change the workflow, the status combo doesn't reflect the correct value. But if I create a new task it does.

This might be why you're not seeing what you're expecting.
